
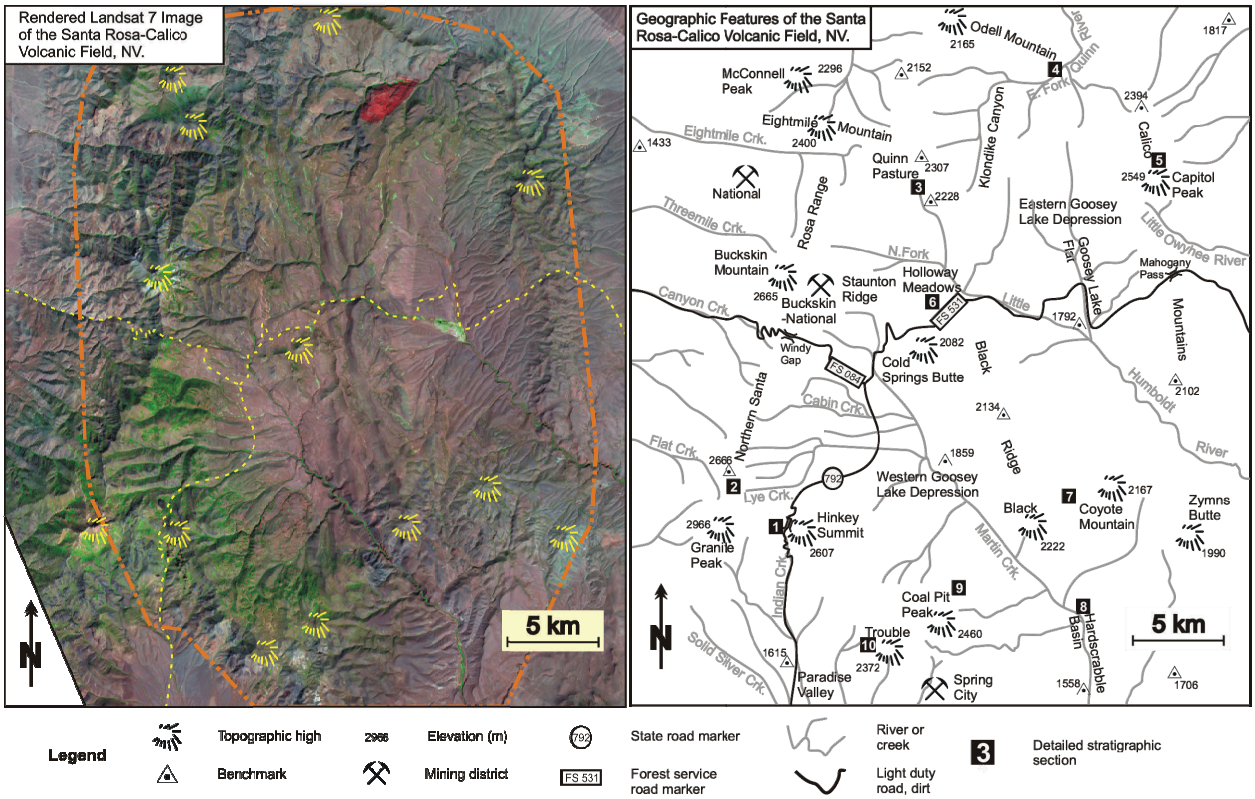

Figure 2. Satellite image and map of the Santa Rosa-Calico volcanic field depicting physical landmarks. The left is a Landsat 7 image rendered so bands 7, 4, and 3 are red, green, and blue, respectively. Orange dashed line is approximate boundary of the SC; SC outflow extends past this line in all directions. Dashed yellow lines on the image are major roads, which are also depicted and numbered on the map to the right of the image. Yellow symbols that resemble hills are identical to those in black depicted in the map and denote topographic highs (named on the map). The rugged SC topography is visible on this image and the large bright red patch near Odell Mountain is a recent burn area. The black and white map on the right depicts SC topographic high-points, rivers/streams, and geographic features. The boxed numbers denote the location and number of the stratigraphic sections depicted in Figure 13.
