
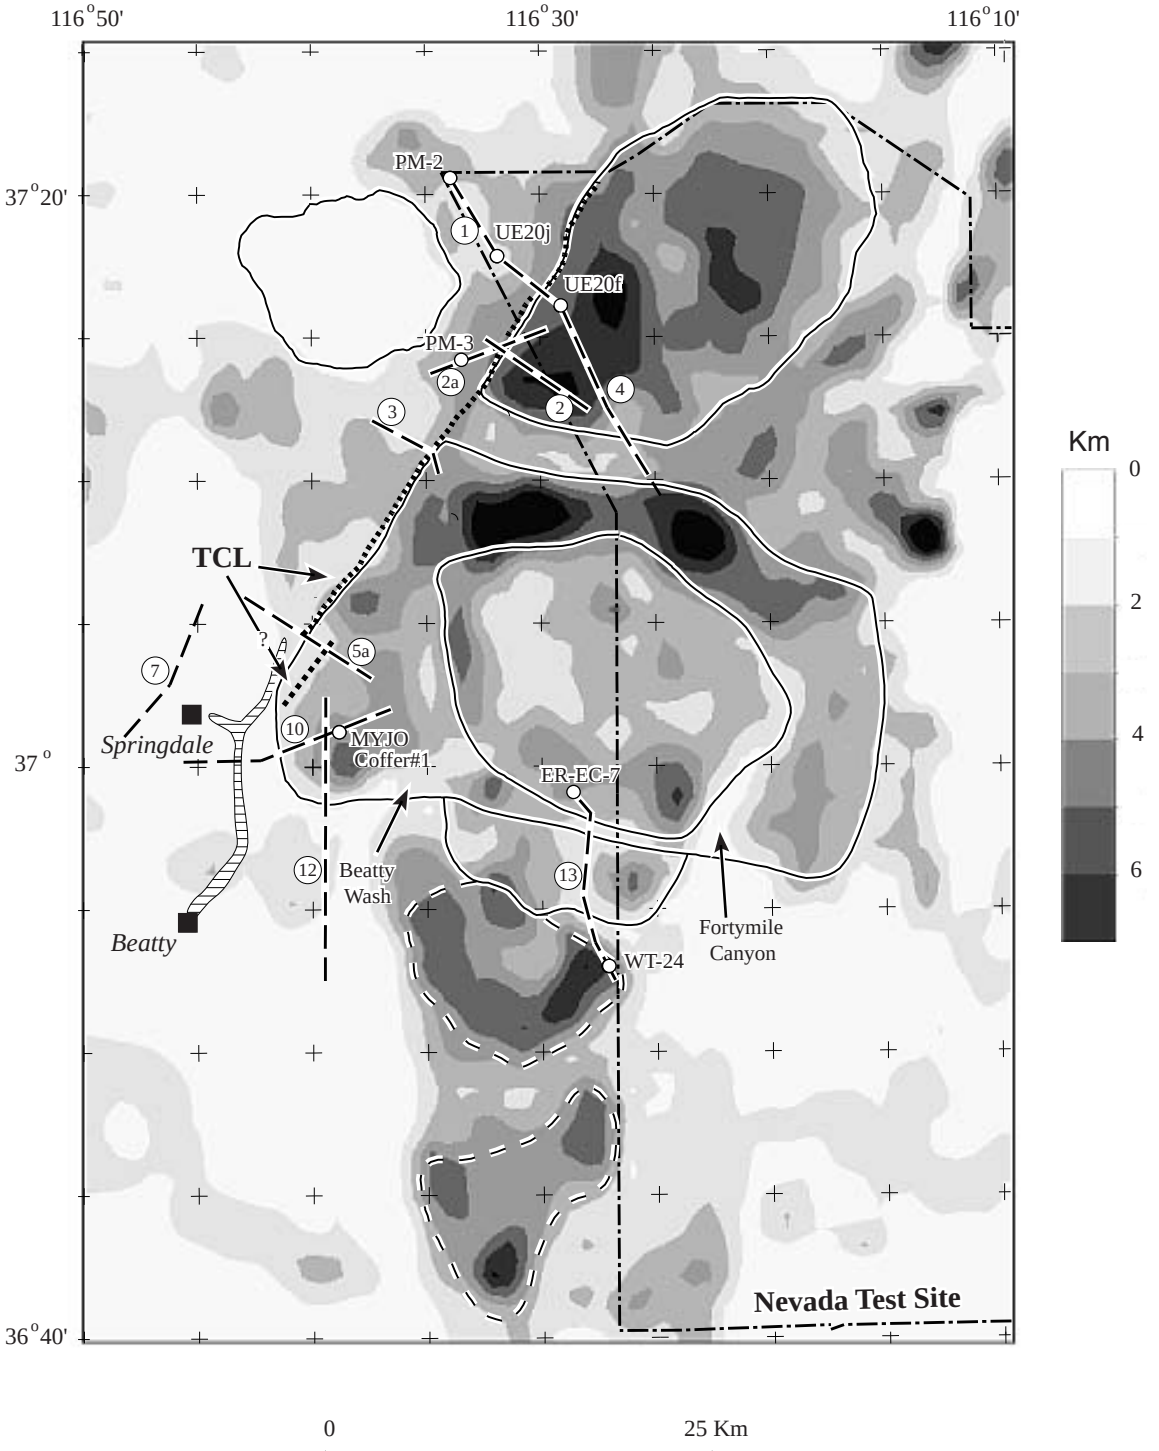

Figure 5. Thickness of Cenozoic volcanic rocks and sedimentary deposits based on the inversion of gravity data and constrained by well data (Hildenbrand and others, 1999). Dotted line is the Thirsty Canyon lineament (TCL). Dashed lines show location of selected gravity profiles (numbered) from Mankinen and others (1999). Black/white lines are caldera boundaries. Also shown are locations of selected drill holes mentioned in text. See figure 1 for additional explanation.
