

## Primer on Webmap Use

Tools in your website depend on the purpose and use of the application. Some or all of these may be available:

Name	Icon	Description
<b>Zoom in</b>		<b>Click and drag a rectangle:</b> Click and hold the left mouse button down on the map at one corner of the rectangle to zoom in to. Drag the mouse to the other corner of the rectangle, and release the mouse button. The map will zoom in to the area of the rectangle.
<b>Zoom out</b>		<b>Click and drag a rectangle:</b> the map will zoom out so that the current map area will fit into the rectangle drawn. The smaller the rectangle you draw, the more the map will zoom out.
<b>Pan</b> (recenter)		<b>Click and drag the map:</b> Click and hold the left mouse button on the map, and drag the map. The map will be recentered, with the location dragged at the location you dropped it.
<b>Full extent</b>		<b>Full extent:</b> Immediately zooms the map out to the area of all features and layers. The active tool does not change.
<b>Identify</b>		<b>Click to identify:</b> Click with the left mouse button on the map. A small icon is added to the map  and the Location is added to the section in the Console. See <a href="#">Results</a> for how to use the identification information.
<b>Measure</b>		<b>Measure distance or area:</b> See <a href="#">Measuring</a> for usage.

To print a map, click on the “**Print A Map**” button above the **Map Contents**, you can pick the page size, change the title, and add your results to the map. Note: the full page will only print about a half page map and the legend with results will be on the lower half page.

Click buttons on the left, under **Map Contents**, to turn features on and off. A check mark indicates that the feature is on; no check mark means it is off. Some sample site symbols fall directly over other symbols. To identify  points of a certain feature (layer), it may be helpful to turn off other layers. For example, turning off the Mining Districts layer will commonly make it easier to identify other sites.

If you want to start all over and zoom back to the full map, use the Full Extent icon.

To expand the Legend or to display the symbol used for each layer, click the “plus” box to the left of the checked button.
