Dear Linda:

Enclosed are the Monthly Production/Injection Reports for the month of July 1995.

July 13 - Lost 21-5, high PSI condensor
July 18 - Lost 21-5, lighting strike

Due to the failure of the turbine inlet steam flow measurement device, steam flow was calculated based on daily megawatt output. Plant load status is a function of steamflow to the plant, and the relationship between turbine inlet steam flow and 24 hours gross generation used for this report was determined through linear regression of January - December 1993 data.

If you have any questions or comments after reviewing the enclosed, please call me.

Subject: Monthly Production / Injection Report for March 1995

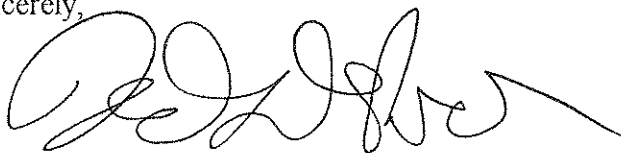

Dear Linda,

Enclosed are the monthly Production / Injection Reports and Electrical Generation Report for the month of March 1995.

Last month the annubar used to measure turbine inlet steamflow failed and is not operational. This instrument cannot be replaced until a plant maintenance shut-down occurs. Unfortunately, this measurement is used in the calculation of total production and injection. However, no changes in operation have occurred this month, and any data you derive from this report involving wellflow could be extrapolated from historical reports and current power generation.

If you have any questions or comments concerning this report, please call me at 849-1299.

Sincerely,

Ted De Rocher
Hydrologist
