RE: Monthly Production and Injection Reports

Enclosed is the *July 2007* monthly report of production, injection and plant operations for Ormat Nevada Inc., Steamboat I/IA, Steamboat II/III, Steamboat Hills, Galena I, and Galena 2 Power Plants.

Also enclosed you will find an Explanation of Reporting Calculations Form with a Process Flow Diagram for the SBHills and Galena 2 Power Plants. This form will explain in detail how the total allocation of KWH Produced and KWHs to Sales are determined for each production well at the SBHills and Galena 2 Power Plants.

Please call my office at 852-1444 ext. 14 if you should have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "R. Filut".

**Explanation of Reporting and Calculations**  
**Reference Process Flow Diagram General View Drawing No. 7.012.00.011.0**

1	The kilowatt hours Produced for each production well is an allocation of total produced (Gross) kilowatt hours from the complex based on calculated enthalpy delivered from each well. Calculated enthalpy delivered is measured mass flow from wells x constant enthalpy value for each well. Thus, KWH produced by an individual well is determined by (Total Gross Power delivered / Total calculated enthalpy delivered) x calculated enthalpy of the corresponding well.
2	The kilowatt hours to Sales for each production well is an allocation of total to Sales (Net) kilowatt hours from the complex based on calculated enthalpy delivered from each well. The calculation is as described in Note 1.
3	Each production well discharge is equipped with temperature and pressure elements and an orifice flow element which read out on the plant HMI. Mass flow from each well is calculated by the HMI from these inputs and other measured fluid properties including composition and enthalpy. For single-phase lines the standard orifice meter calculations are used. For two-phase lines the flow is calculated as described by Russell James in "Metering of Steam-Water Two-Phase Flow By Sharp-Edged Orifices", Process Instrumentation for Mechanical Engineers 1965-66, Vol 180 Pt1 No23. The readings are read from the HMI. Single-phase measurements precision is estimated to be +/- 3%. Two-phase measurement precision is estimated to be +/- 20%.
4	The Average Well Temperature is the average well head discharge temperature during the reporting period.
5	Gross generation is read from meters at generator output
6	Net Generation is read from Revenue meters for SBH and Galena 2
7	Total Gross generation is the sum of SBH and Galena 2 Gross generation
8	Total Net generation is the sum of SBH and Galena 2 Net generation
9	Total Gallons produced is the sum of all production wells.
