Note 2. Inventory: Draycutt reported some 7016 barrels in inventory at the end of April 1993. There are six tank batteries in the Field, only two of which are active--Battery A with 1600 BBLS. of capacity and Battery B with 2,000 BBLS. of capacity. Eagle Springs gauges of these tanks on 09/01/93 showed 1,540 BBLS. of oil. Four other inactive batteries were checked and appear to contain seven tanks of solidified emulsion. We have been informed by others that these tanks contain oil/water and bottom sediment and water which was spilled or contaminated in prior years. It is unknown at this time whether chemical and heat treatment will enable Eagle Springs Production Ltd. to sell the fluid or if it will be removed and disposed as waste. Beginning with September 1993's report, Eagle Springs Production Ltd. will report the gauged inventory and capacity in Batteries A and B.

I hereby certify that the information given herewith is true, correct and complete.

Remarks:

Note 2. Inventory: Draycutt reported some 7016 barrels in inventory at the end of April 1993. There are six tank batteries in the Field, only two of which are active--Battery A with 1600 BBLS. of capacity and Battery B with 2,000 BBLS. of capacity. Eagle Springs gauges of these tanks on 09/01/93 showed 1,540 BBLS. of oil. Four other inactive batteries were checked and appear to contain seven tanks of solidified emulsion. We have been informed by others that these tanks contain oil/water and bottom sediment and water which was spilled or contaminated in prior years. It is unknown at this time whether chemical and heat treatment will enable Eagle Springs Production Ltd. to sell the fluid or if it will be removed and disposed as waste. Beginning with September 1993's report, Eagle Springs Production Ltd. will report the gauged inventory and capacity in Batteries A and B.

I hereby certify that the information given herewith is true, correct and complete.
